

# REMEMBERING JUDITH TENDLER

*American economist and social scientist, she inspired a generation of scholars and social operators interested in development policies. Her intellectual legacy is twofold. On the one side, her writings on local and regional development, on the policies of poverty alleviation, on organizational theories with a special focus on the public sector: an original theory arguing from positive surprises, unforeseen workings and the conditions to strengthen them. On the other side, her way of teaching, inspired by a deep dedication to the students she had decided to follow, from whom she expected excellence in study and field work, and to whom she dedicated most of her energies.*
